SENTIMENTAL ENERGY

February EDITION

Editor's Note

February has been a month of growth and impact for SENTEC! From attending key industry events to training our technicians and lighting up communities, we continue to drive the renewable energy movement forward.

This month, we participated in the Nyanza International Conference and the Kenya Private Schools Directors' Consultative forum, engaging with leaders on clean energy solutions. We also enhanced our team's expertise through hands-on training and brought sustainable lighting to the Nanderema community in Busia, improving security and livelihoods.

As we step into March, we're gearing up for even bigger opportunities, including our MD's participation as a speaker at the Intersolar Summit Africa. We remain committed to advancing clean energy solutions and creating lasting impact.

Thank you for being part of our journey—here's to a future powered by sustainability and innovation!

MESSAGE FROM OUR DIRECTOR

February has been a month of growth and transformation for SENTEC. As we continue to push the boundaries of clean energy, our focus remains on delivering sustainable, reliable, and innovative solutions that positively impact businesses, institutions, and communities.

One of our key priorities this month has been capacity building. Our technicians participated in hands-on training sessions, equipping them with advanced skills to enhance service delivery. Skilled professionals are the backbone of our success, and we are committed to continuous learning and development to maintain the highest standards in the industry.

Beyond internal growth, strategic engagement and partnerships have played a critical role in our progress. Through our participation in the Nyanza International Investment Conference and the Kenya Private Schools Directors' consultative forum, we strengthened collaborations with key stakeholders, ensuring that clean energy solutions are not only available but also accessible to institutions and communities across Kenya.

At the heart of our mission is community impact. This month, we made significant strides with our solar lighting project in Nanderema, Busia County, a testament to our commitment to providing energy solutions that improve security, support livelihoods, and enhance the quality of life. As we scale our efforts, more communities will benefit from sustainable energy, reinforcing our vision of a future where clean power is the norm, not the exception.

Looking ahead, we are preparing for exciting opportunities in March, including our participation at the Intersolar Summit Africa, where I will be speaking on the future of solar energy in the region. This is a platform for knowledge-sharing, collaboration, and shaping the industry's direction, and we are honored to be part of this crucial conversation.

As always, I extend my gratitude to our partners, clients, and the entire SENTEC team for their dedication and belief in our mission. Together, we are building a cleaner, greener, and more sustainable future—one project at a time.

Eng. Paul Simiyu Mabonga
Managing Director
Sentimental Energy Company

SENTEC Strengthens Industry Presence at Key Events

February has been a month of strategic engagement for SENTECH, as we participated in two key industry events—the Nyanza International Investment Conference and the Kenya Private Schools Directors' consultative forum. These platforms provided invaluable opportunities to connect with key stakeholders, exchange knowledge, and advocate for wider adoption of clean energy solutions in Kenya. Through insightful discussions and networking, we explored new collaboration opportunities, highlighted the benefits of solar energy, and addressed challenges in implementing sustainable energy solutions across various sectors.

1. Nyanza International Investment Conference

At the Nyanza International Investment Conference, SENTECH engaged with energy leaders, policymakers, and innovators committed to advancing sustainable solutions in the region. Our discussions focused on scaling clean energy adoption, addressing key barriers, and identifying opportunities for collaboration. Through these engagements, we strengthened our network, gained insights into emerging industry trends, and showcased how SENTECH's innovative solutions are bridging the energy gap.

A key takeaway from the conference was the growing interest in solar as a long-term, cost-effective solution for businesses and institutions. Many stakeholders expressed the need for flexible financing models, a challenge SENTECH is already tackling through Lease-to-Own and Power Purchase Agreement (PPA) models. The event reinforced our role as a trusted partner in accelerating Kenya's transition to renewable energy.

2. Kenya Private Schools Directors' Consultative Forum

With rising electricity costs posing financial challenges for institutions, our discussions focused on how schools can adopt solar solutions to reduce operational expenses while ensuring reliable power for learning.

By engaging with key decision-makers, including school administrators and education stakeholders, we showcased real-life case studies where schools have successfully transitioned to solar, achieving significant cost savings and uninterrupted power supply.

Many schools showed keen interest in customized solar solutions, leading to promising follow-up discussions on potential installations.

LIGHTING UP NANDEREMO COMMUNITY

In many rural areas, lack of reliable lighting continues to pose challenges for safety, education, and economic activities.

Nanderemo was no exception—residents struggled with insecurity at night, limited business hours, and students unable to study after dark. Recognizing the need for a sustainable solution, Sentimental Energy stepped in to make a difference.

THE NEWS

By installing 3 solar high masts, we have completely transformed Nanderemo, bringing more than just light—we've brought new possibilities. With clean, dependable lighting, security has vastly improved, allowing residents to move freely at night without fear. Local businesses are thriving as vendors can extend their working hours, boosting economic activity and financial stability.

But this project is more than just infrastructure—it's a long-term investment in Nanderemo's growth. With solar-powered solutions, the community is now more connected, secure, and economically empowered, proving that clean energy is not just about sustainability but also about social and economic progress.

Bringing Solar Home: Eldoret Residential Installation

In Eldoret, one of our residential clients faced rising electricity costs and frequent power outages, disrupting daily life and increasing expenses. Like many homeowners, they sought a reliable, cost-effective, and sustainable solution to reduce dependence on the grid while ensuring a steady power supply for their household.

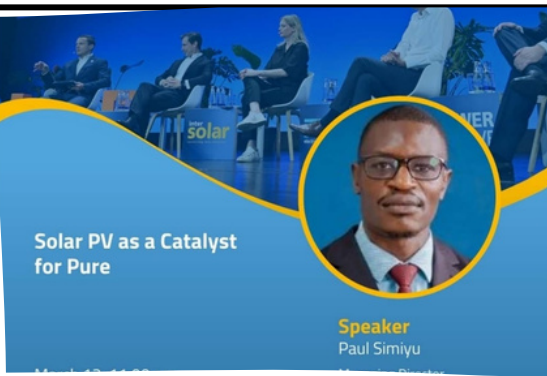

The News

To meet this need, Sentimental Energy installed a customized solar system, designed to optimize energy use while providing a stable and affordable alternative to traditional electricity. With this system in place, the homeowner now enjoys lower monthly electricity bills, fewer disruptions due to blackouts, and an overall improved quality of life.

This solar solution ensures that essential household appliances such as lighting, refrigeration, water heating, and entertainment systems continue running smoothly, without the inconvenience of unexpected power cuts. Additionally, by switching to solar, the homeowner is actively reducing their carbon footprint, contributing to a cleaner and more sustainable environment.

Beyond immediate savings, the system offers long-term energy security, allowing the household to plan for the future without worrying about fluctuating electricity costs. With a quick return on investment and minimal maintenance requirements, solar energy has proven to be a smart and sustainable choice for this home.

This project highlights the increasing demand for residential solar solutions, demonstrating that solar energy is no longer just for industries and large institutions—it is a game-changer for homes as well. At SENTEC, we are proud to be at the forefront of this movement, empowering more homeowners to take control of their energy needs with efficient, affordable, and future-ready solar solutions.

UPCOMING EVENT

We are thrilled to announce that Eng. Paul Simiyu, our Managing Director, will be a key speaker at the Intersolar Summit Africa on March 13th from 11:00 AM.

Speaking on "Solar PV as a Catalyst for Pure", he will delve into the role of solar energy in driving sustainability, energy access, and economic transformation across Africa. As SENTEC continues to lead in clean energy solutions, this summit provides an excellent platform to share insights, engage with industry experts, and explore innovative solar advancements shaping the future.

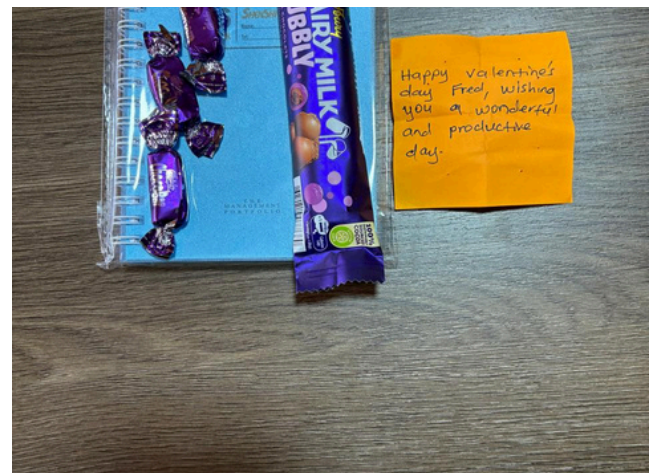

THE MONTH OF LOVE AND SUSTAINABILITY

February is the month of love, a time to celebrate the connections that bring warmth into our lives. But at SENTEC, love extends beyond people—it's about caring for our planet and ensuring a sustainable future for generations to come.

Just as love nurtures and uplifts, solar energy does the same by providing clean, reliable power that transforms homes, schools, and businesses. This Valentine's, we were reminded that the most meaningful gifts aren't just flowers and chocolates but choices that leave a lasting impact—like embracing renewable energy for a greener tomorrow.

Let's continue to spread love, light, and sustainability, not just in February but all year round. Because a future powered by the sun is a future built on love.
